

Trees as air-conditioning

Forests have ecological and economic importance. They are important for human health and well-being. Forests regulate the temperature and humidity of the land. It is always a few degrees cooler under the trees.

Task No.1

The forest represents an exceptional community that has irreplaceable natural functions: production, climatic, hygienic, hydric, edaphic, biocenotic, social, psycho-emotional.

Try to think and write what you think each function means.

Production –

Climatic –

Hygienic –

Hydric –

Edaphic –

Biocenotic –

Social –

Psycho-emotional –

Task No.2

Find out what types of forests are near your place of residence and write what function these forests are used for.
