
SOIL

Briefly write how man increases the fertility of the soil and how, on the contrary, it decreases it. A whole book could be written about it, but a few basic points are enough.

.....

.....

Which soil properties are the most important for humans?

.....

.....

Try to find out which rock forms soil easily and which does not.

.....

.....

Find out why some soils are red?

.....

.....

Ask your parents, and grandparents, if anyone in the family owns a piece of land. If so, find out if a relative manages it or rents it out. If he rents it out, there is a tenancy agreement. Ask them if you could look at this contract, take a picture of it, or bring it to school.

How it used to be: Ask your parents, or grandparents if they ever worked in the garden, field, or orchard.

- When and where?

- Was it part-time work at school, studies, or paid work? Or work in their garden or field?

- Find out more details: how they worked in their own garden.

Or when it was paid work?

- What did they enjoy about it? What was difficult?
